How to Build the **Best Macroscopic Description** of your Multi-agent System?

Laboratoire d'Informatique de Grenoble

Robin Lamarche-Perrin

Yves Demazeau

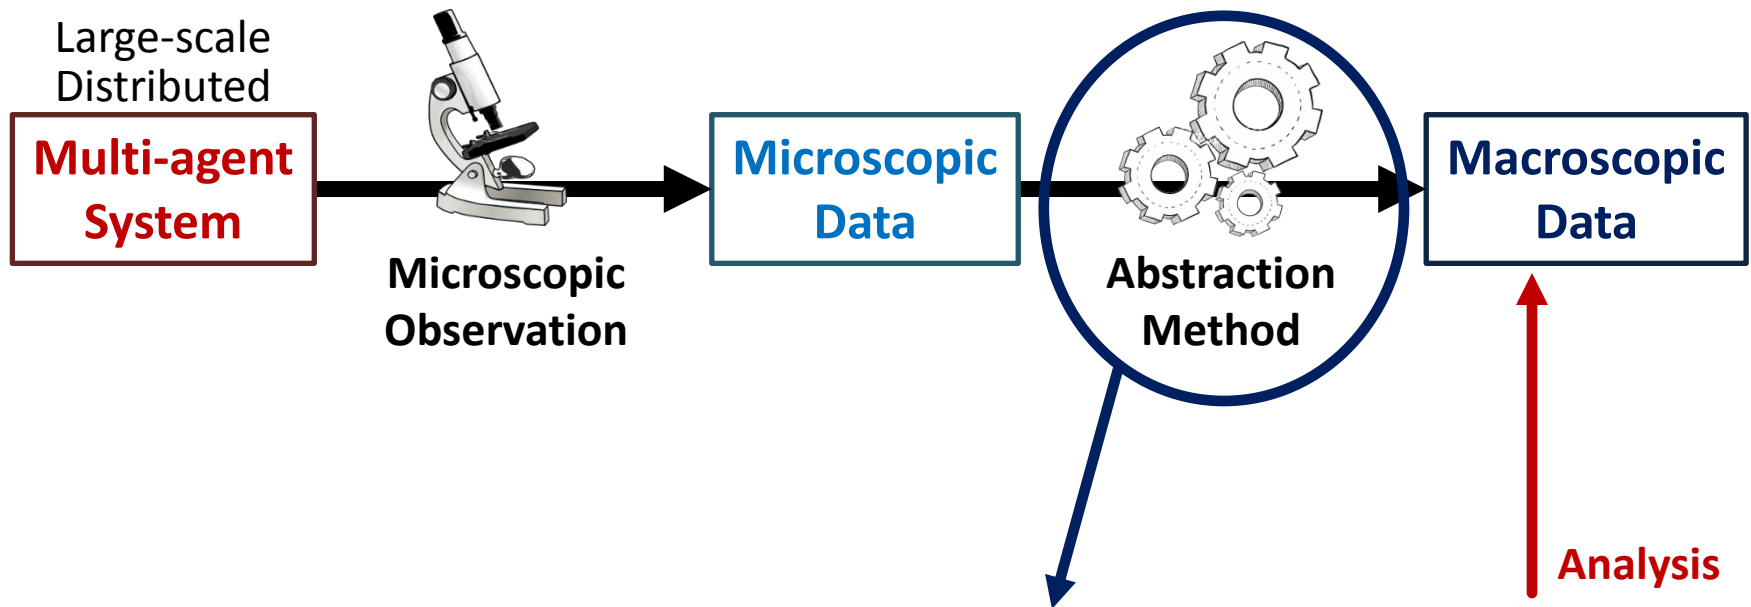

Jean-Marc Vincent

Problem: Analysis of Large-scale MAS

Problem: Analysis of Large-scale MAS

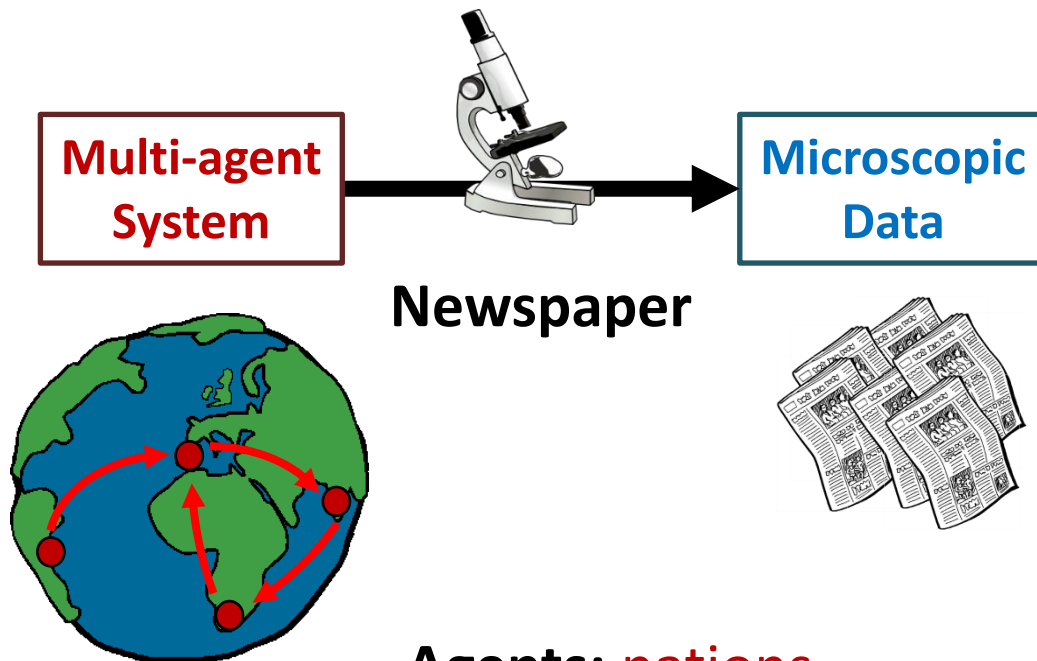

How to build meaningful abstractions
out of microscopic data?

Properly interpreted
Useful for the observer

The GEOMEDIA Project

Analysis of international relations
through print media observation

Agents: **nations**

Interactions: **international relations**

Organisation: geopolitical context

Counting Citations

group

Kullback-Leibler Divergence

$$\text{loss}(p \parallel q) = \sum p(x) \times \log_2 \left(\frac{p(x)}{q(x)} \right) \text{ in bits/citation}$$

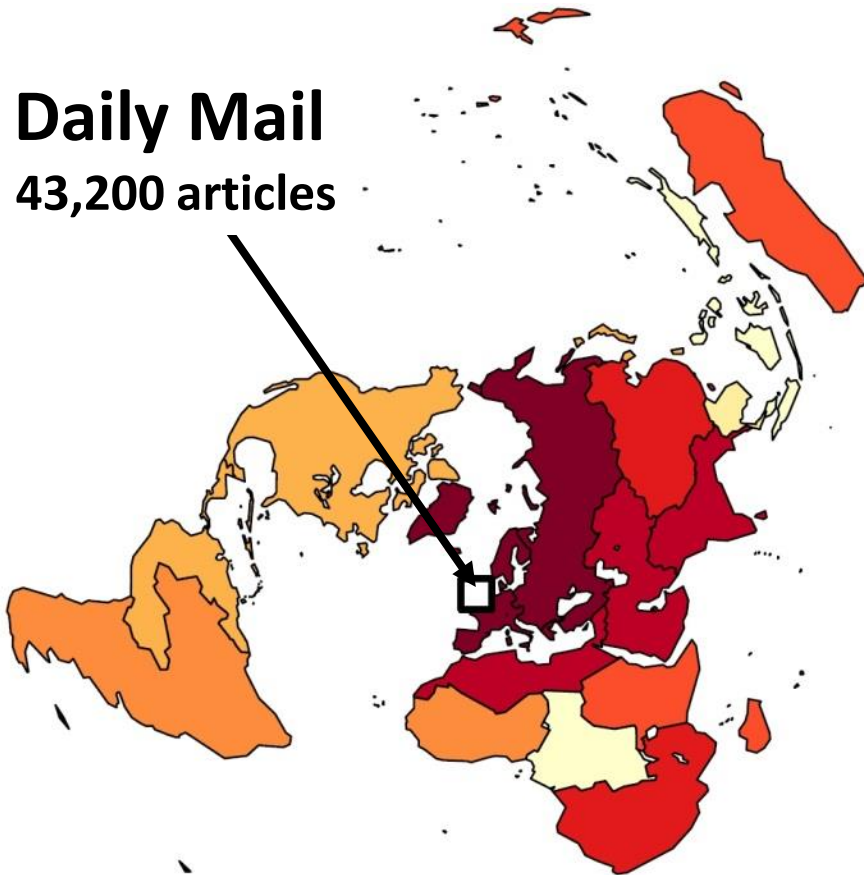

Microscopic distribution Aggregated distribution

Quantity of information that one loses
by using an **aggregated description**
instead of the **microscopic description**

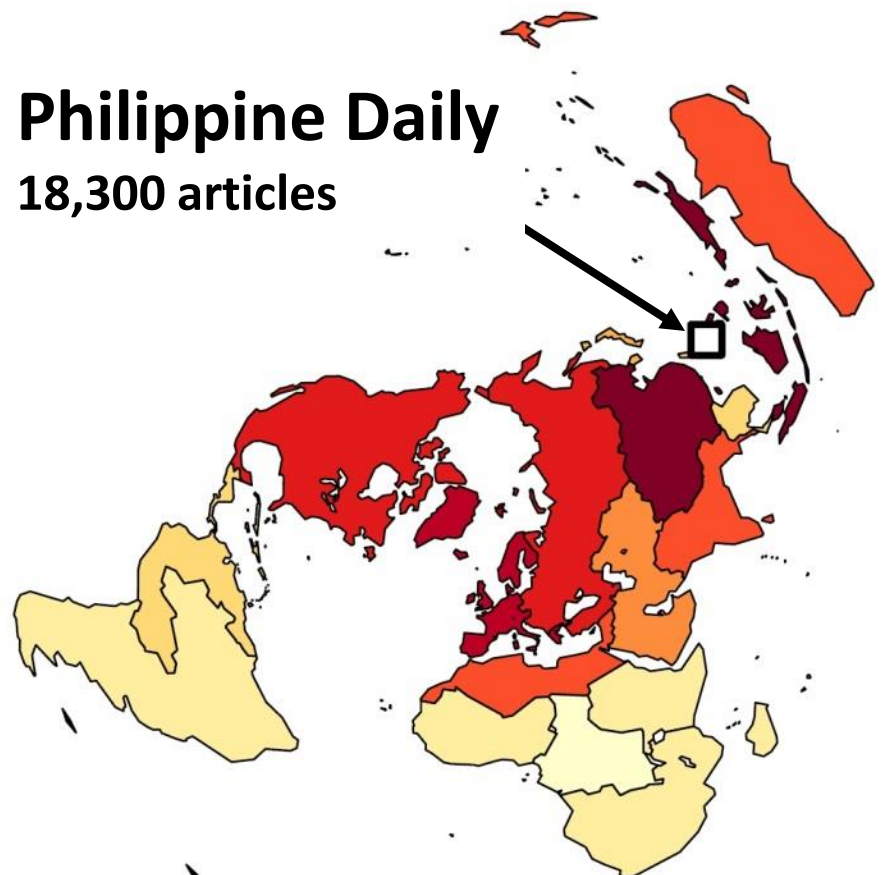

Daily Mail

43,200 articles

Philippine Daily

18,300 articles

Low Divergence

High Divergence

MEASURING THE COMPLEXITY REDUCTION

Shannon Entropy

$$H(p) = \sum p(x) \times \log_2 p(x) \quad \text{in bits/citation}$$

Entropy Reduction: $gain(p \parallel q) = H(p) - H(q)$

Microscopic distribution Aggregated distribution

Quantity of information that one saves
by encoding the **aggregated description**
instead of the **microscopic description**

High Complexity

Shannon Entropy

Low Complexity

Aggregation

**Low
Information Loss**

**Kullback-Leiber
Divergence**

**High
Information Loss**

Parameterized Information Criterion

Complexity Reduction

Information Loss

Maximize $IC_p = p \cdot gain - (1 - p) \cdot loss$

$$IC_0 = -loss \xrightarrow[p \in]{0,1[} IC_1 = gain$$

Microscopic level

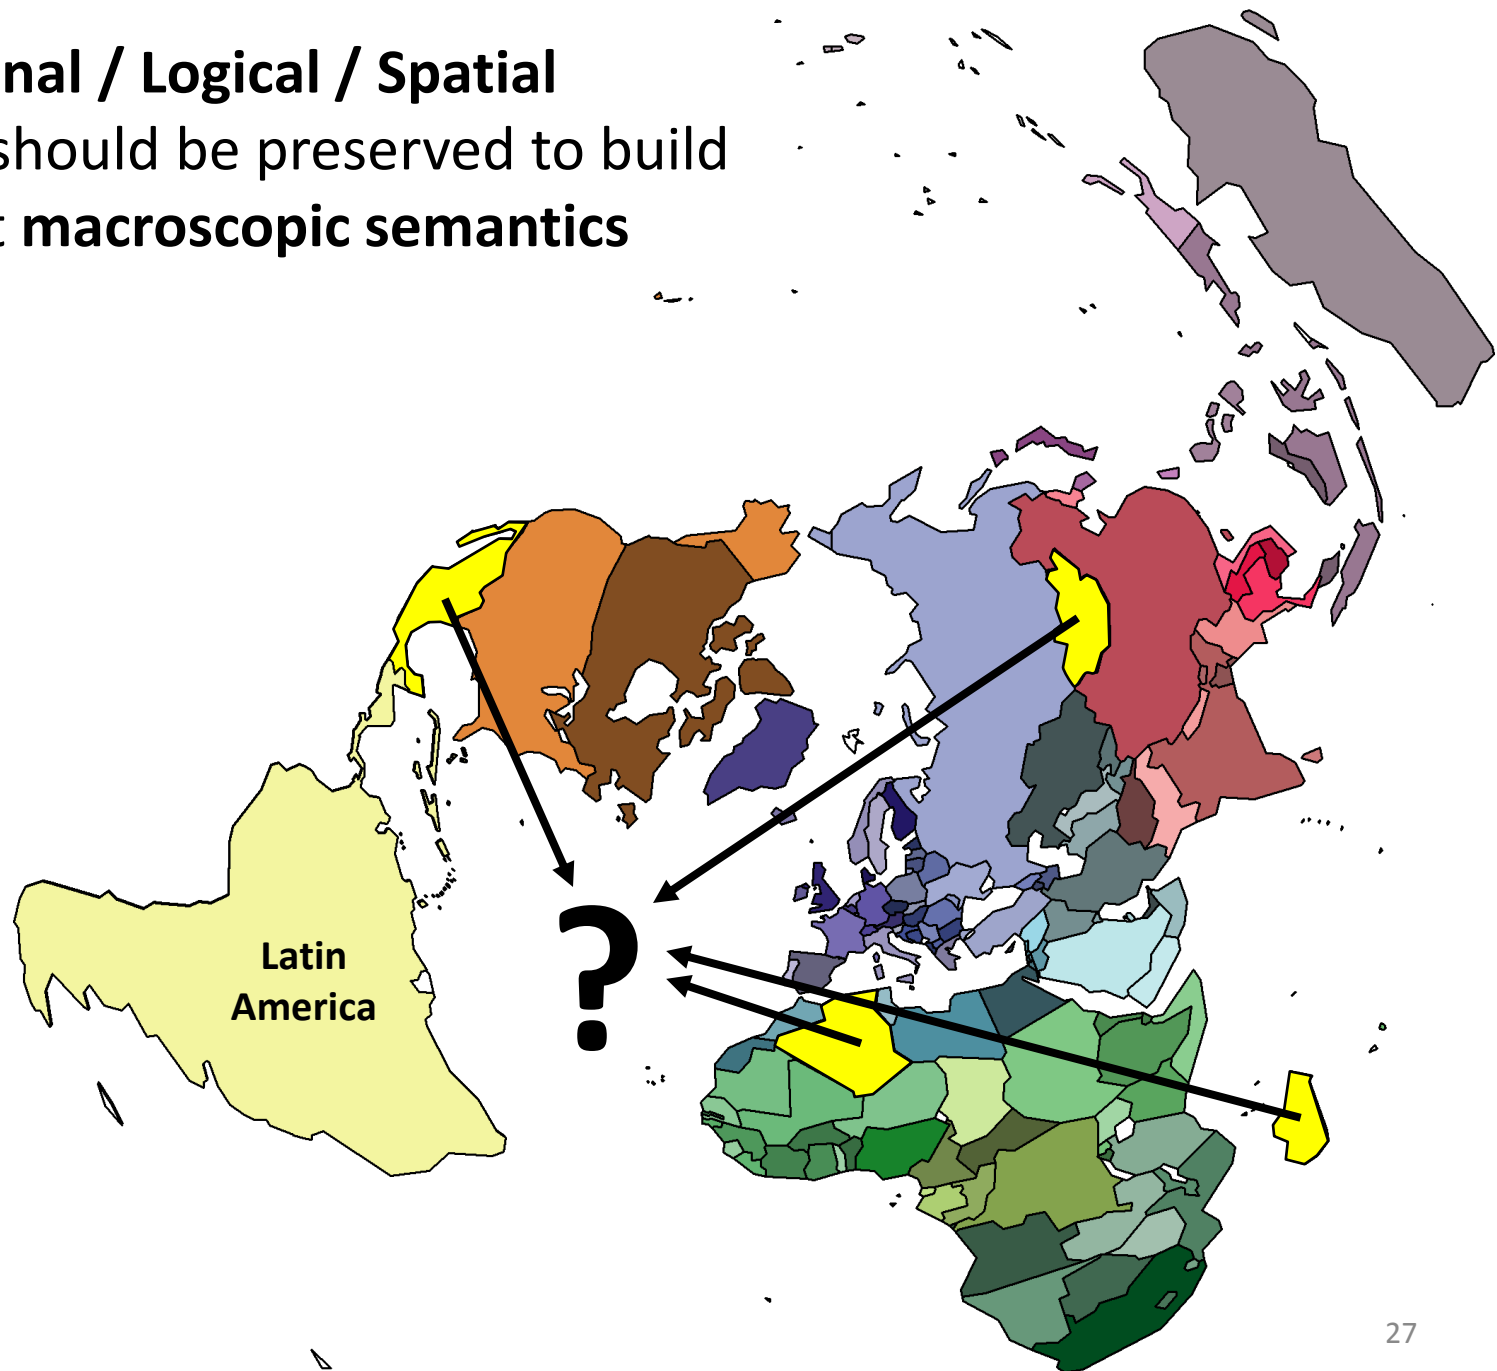

Full aggregation

MACROSCOPIC SEMANTICS

**Organisational / Logical / Spatial
properties** should be preserved to build
a consistent **macroscopic semantics**

Hierarchical MAS
